Personal Statement

Postdoctoral researcher in Astrophysics, seeking to apply my wide skillset as a machine learning engineer. I have over 8 years of experience in scientific software development, machine learning, algorithm derivation and implementation, big data analysis, relational database queries, Bayesian inference, and data visualization. I am the lead developer of many open-source software projects, e.g. 🐙 diffopt, 🐙 diffmahnet, 🐙 galtab, 🐙 JaxTabCorr, and 🐙 mocksurvey.

Experience

Postdoctoral Researcher

Sep 2023 - Present

Argonne National Laboratory, Lemont, IL

- Developed generative models of galaxy populations using neural networks, allowing my team to perform cosmological inference without requiring a million-CPU-hour simulation per evaluation
- Parallelized parameter optimization on distributed GPU clusters, utilizing our high-performance computing resources, enabling nearly limitless scalability of our models and up to 100x faster training times

Graduate Student Researcher / Teaching Assistant

Sep 2017 - Aug 2023

University of Pittsburgh, Pittsburgh, PA

- Generated galaxy data catalogs through machine learning and developed new spatial clustering statistics that produced some of the most significant evidence of galaxy assembly bias to date
- Clear communication of complex concepts through teaching classes and advising undergraduate research
