Personal Statement

Postdoctoral researcher in Astrophysics, seeking to bring my wide skillset to a career in data science. I have over 8 years of experience in scientific software development, algorithm derivation and implementation, big data analysis, relational database queries, Bayesian inference, machine learning, and data visualization. I am the lead developer of many open-source software projects, e.g. diffopt, diffmahnet, galtab, JaxTabCorr, and mocksurvey.

Experience

Postdoctoral Researcher   Sep 2023 - Present
Argonne National Laboratory, Lemont, IL

– Developed generative models of galaxy populations using neural networks, allowing my team to perform cosmological inference without requiring a million-CPU-hour simulation per evaluation

– Parallelized parameter optimization on distributed GPU clusters, utilizing our high-performance computing resources, enabling nearly limitless scalability of our models and up to 100x faster training times

Graduate Student Researcher / Teaching Assistant   Sep 2017 - Aug 2023
University of Pittsburgh, Pittsburgh, PA

– Generated galaxy data catalogs through machine learning and developed new spatial clustering statistics that produced some of the most significant evidence to date of galaxy assembly bias

– Clear communication of complex concepts through teaching classes and advising undergraduate research
